ABS GEN2

Trailer Anti-Lock
Braking System

Smart ECU. Smart Investment.

Trailer monitoring and control is critical for any fleet or vehicle operator on the road today. From safe stopping to rollover prevention to cargo protection and more, the trailer anti-lock braking system (ABS) plays a key role in productivity and uptime. For maximum time on the road, you need a cost-effective ABS solution that's easy to install and maintain while taking advantage of the latest in communications technology.

Introducing Gen2 Trailer ABS from Dayton Parts®. Gen2 allows you to quickly and easily replace your existing trailer ABS electronic control unit (ECU) for unparalleled trailer monitoring and control with more capabilities. Standard ABS ECUs utilize external tools and software for system diagnostics. Gen2 is a SMART ECU that does not require the use of external software for diagnostics and fault codes. By integrating exclusive control logic into the ABS governing hub and information portal, Gen2 allows for highly efficient diagnostic evaluation and dramatically lower cost of operation.

The First to Offer Intelligent Interface.

Gen2 offers revolutionary communication capabilities. It is the first trailer ABS to incorporate a WiFi access point that sends diagnostics to any smartphone or tablet. Now you can receive mobile alerts including the most complete diagnostic information without the need for additional software or diagnostic tools. Future plans for Gen2's intelligent interface include additional monitoring capabilities such as brake and pad wear, tire inflation, trailer tracking and more. All to enhance your condition-based trailer maintenance programs.

Take advantage of the industry-first Gen2 intelligent interface and be at the forefront of innovative trailer ABS diagnostic communications.

System Requirements.

Gen2 provides reliable performance day in and day out. Whether you need a 2S/1M single-channel system or a 4S/2M multi-channel system, we offer the right configuration to meet your trailer needs.

2S/1M Basic

A 2-sensor/1-modulator system offers increased assistance to the driver in maintaining directional stability and control while meeting FMVSS 121 requirements.

4S/2M Premium

A 4-sensor/2-modulator system for the best control in multi-axle applications.

Gen2 Advantages.

- ECU can be used on existing Meritor WABCO® ABS platforms
- First to offer WiFi interface
- Does not require costly software and tools to maintain
- Diagnostics can be performed from a smartphone or tablet
- No blink code diagnostics needed
- Approved by major OEM trailer manufacturers

Exceptional Support, Mile After Mile.

The Gen2 ECU is covered by a 3-year warranty. All other Gen2 system parts are covered by Dayton Parts 1-year standard aftermarket warranty.

For all the support you need, mile after mile, rely on the Dayton Parts expert customer advocate team. From spec'ing assistance to technical information, troubleshooting and more, call us at 800.233.0899 or visit daytonparts.com.
